

Eagle Pneumatic Mini-Mark II Air-Lift System

Like our standard Mark II, the Eagle Pneumatic Mini-Mark II Air-Lift System is a durable and reliable pressure/vacuum system that requires power only at one end of the system. The Mini-Mark II System moves carriers in one direction using pressure and with vacuum power on return to provide a highly dependable "push-pull" operation.

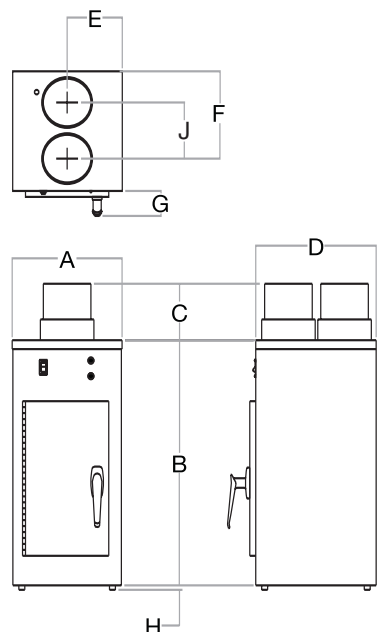

The smaller Mark II System is ideal for a wide range of industrial, retail and commercial applications, requiring only minimal counter space. The installation of intermediate stations provides the capability to expand your system for even greater flexibility.

See how the Eagle Pneumatic Mini-Mark II Air-Lift System can work for your business. Call your Eagle Pneumatic dealer today.
